```

2. Curated Outputs

Criteria for “Best”

Here are the five best weather forecasts. In this context, "best" refers to the most unrealistic and absurd forecasts, specifically those featuring exceptionally high or low temperatures or unseasonable weather conditions. The following section explains the generated weather forecast and the reasons for its selection (i.e., why this weather forecast is absurd).

1

The weather on February 16, 2028 will be fog.
In the morning, it will be heatwave, and the temperature is expected to reach -17°.
In the afternoon, it will be fog, and the temperature is expected to reach 39°.
At night, it will be clear skies, and the temperature is expected to reach 34°.
Expect a soft golden dawn with strong crosswinds.
There will be muggy air and a slight chance of precipitation.
Overall, reduced visibility is likely.
Note: pollen levels will be elevated.

This weather forecast is entirely impossible and absurd. It predicts a heat wave with temperatures ranging from -17°C in the morning to 39°C in the afternoon and 34°C at night under clear skies. Such extreme temperature fluctuations—over 50°C in a single day—are physically impossible under normal Earth conditions. Furthermore, the described weather conditions are mutually exclusive: a heat wave cannot coexist with freezing temperatures, fog rarely occurs at such high temperatures, and nighttime temperatures typically decrease rather than remain extremely hot. Additional details, such as strong crosswinds, muggy air, reduced visibility, and a "soft golden dawn," only add to the inconsistency, rendering the forecast scientifically nonsensical.

2

The weather on July 29, 2025 will be heatwave.
In the morning, it will be mostly cloudy, and the temperature is expected to reach 1°.
In the afternoon, it will be sleet, and the temperature is expected to reach -11°.
At night, it will be snow, and the temperature is expected to reach -30°.
Expect a hazy glow with a light breeze.
There will be muggy air and a slight chance of precipitation.
Overall, poor visibility is likely.
Note: UV levels will be high.

This weather forecast is good because it is utterly impossible. It predicts a heatwave, yet the morning temperature is only 1°C, the afternoon reaches -11°C with sleet, and nighttime drops to -30°C with snow. Such extreme cold in the middle of summer, combined with a heatwave label, is physically impossible. The described weather conditions also contradict each other: heatwaves imply very high temperatures, not subzero conditions; sleet and snow cannot occur alongside muggy, high-UV conditions; and poor visibility with a “hazy glow” is inconsistent with -30°C nighttime snow.

3

The weather on August 10, 2028 will be heavy rain.
In the morning, it will be snow, and the temperature is expected to reach -14°.
In the afternoon, it will be windy, and the temperature is expected to reach 19°.
At night, it will be mostly cloudy, and the temperature is expected to reach -5°.
Expect a pale blue sky with gusty winds.
There will be comfortable humidity and a high chance of precipitation.
Overall, poor visibility is likely.
Note: air quality will be fair.

The weather forecast is impossible and nonsensical. The conditions contradict each other. Heavy rain and snow on the same day at these temperatures is unlikely. A "pale blue sky" does not match heavy rain and gusty winds. Comfortable humidity with poor visibility is inconsistent with these extremes.

4

The weather on July 19, 2026 will be overcast.

In the morning, it will be mist, and the temperature is expected to reach 33°.

In the afternoon, it will be tropical storm, and the temperature is expected to reach 5°.

At night, it will be light rain, and the temperature is expected to reach -9°.

Expect a hazy glow with strong crosswinds.

There will be dry air and no chance of precipitation.

Overall, poor visibility is likely.

Note: pressure will be falling.

The weather forecast is also impossible. It predicts overcast skies for the day, yet the morning temperature is 33°C with mist, the afternoon drops to 5°C during a tropical storm, and nighttime falls further to -9°C with light rain. The described weather conditions contradict each other: a tropical storm cannot happen at 5°C, mist and light rain do not match dry air or “no chance of precipitation,” and poor visibility with a hazy glow is inconsistent with the temperature and storm details.

5

The weather on May 6, 2027 will be thunderstorms.

In the morning, it will be rain then clearing, and the temperature is expected to reach 10°.

In the afternoon, it will be sunny with passing showers, and the temperature is expected to reach -4°.

At night, it will be sleet, and the temperature is expected to reach -21°.

Expect broken cloud bands with gusty winds.

There will be dry air and a slight chance of precipitation.

Overall, poor visibility is likely.

Note: cloud cover will be dense.

The weather forecast for May 6, 2027 is entirely impossible and absurd. The conditions also contradict each other: thunderstorms cannot happen at -4°C, “sunny with passing showers”

conflicts with dense cloud cover, and sleet combined with dry air and a slight chance of precipitation makes no meteorological sense.

3. Process Documentation (300 words)

The generator was created using VS Code's AI capabilities. I devised a weather forecast template—structured as "On [Month/Day], the morning weather will be [random weather condition] with a temperature of [random number]°C; the afternoon will bring... (Note: ...)"—and tasked the AI with generating the corresponding code. Furthermore, I designed the necessary weather patterns (e.g., sunny, rainy, snowy) and incorporated them into the code. I commissioned an AI to handle the coding, but I personally made the necessary adjustments—such as modifying output quantities and refining specific details—using VS Code. For the parameters, I utilized Python's `random.random` function to generate pseudo-random numbers, thereby enabling the selection of random weather conditions and the output of numerical values. The code was designed to construct sentences based on a set of initial rules, ensuring a consistent format across all weather forecasts. The program is capable of generating 10 distinct outputs per execution; aiming for a total of five runs, I successfully produced a set of 50 weather forecasts.

4. Artist Statement (250 words)

The essence of AI creativity lies in its randomness. When humans generate text, their output inevitably reflects their thought processes and personal biases. For example, if someone were to create a nonsensical weather forecast, they could produce one that is utterly implausible. However, if that same person were to generate fifty such forecasts, the results would likely resemble one another, perhaps featuring wildly disparate temperatures or weather conditions that do not align with the given season. While humans can produce creative works, generating them in large quantities often results in similar pieces, causing the collection to lose its uniqueness. Conversely, AI is capable of generating content that is almost entirely random. Furthermore, AI can generate massive volumes of nonsensical weather forecasts simultaneously due to its rapid processing speed. This output will naturally include a mix of plausible forecasts, as well as dull or uninspired ones. Yet, because AI lacks personal quirks, it can generate content without introducing any specific biases or patterns. I consider this randomness to be the source of AI's creativity. In this generative process, human intervention serves as the arbiter, determining whether the text produced by AI is "interesting."

Since AI output includes results that humans would deem "dull" or "boring," these must be filtered out manually. This judgment task should be reserved for humans because, while an AI can make random selections, it struggles to comprehend and apply the intrinsic human criteria for "interest" or "excellence."

In this context, "best" refers to the most unrealistic and absurd forecasts, specifically those featuring exceptionally high or low temperatures or unseasonable weather conditions. The following section explains the generated weather forecast and the reasons for its selection (i.e., why this weather forecast is absurd).

Output of the program, total number, 50

Output_1

The weather on October 8, 2025 will be dust storm.
In the morning, it will be tropical storm, and the temperature is expected to reach 23°.
In the afternoon, it will be mist, and the temperature is expected to reach 20°.
At night, it will be tropical storm, and the temperature is expected to reach 1°.
Expect broken cloud bands with variable winds.
There will be muggy air and no chance of precipitation.
Overall, poor visibility is likely.
Note: pressure will be steady.

The weather on August 3, 2028 will be clear skies.
In the morning, it will be blizzard, and the temperature is expected to reach 30°.
In the afternoon, it will be blizzard, and the temperature is expected to reach 21°.
At night, it will be cold snap, and the temperature is expected to reach -5°.
Expect a soft golden dawn with strong crosswinds.
There will be muggy air and a high chance of precipitation.
Overall, good visibility is likely.
Note: pressure will be rising.

The weather on May 31, 2024 will be sun breaks after rain.
In the morning, it will be drizzle, and the temperature is expected to reach 39°.
In the afternoon, it will be partly cloudy, and the temperature is expected to reach 27°.
At night, it will be dust storm, and the temperature is expected to reach -24°.
Expect a sharp, crisp horizon with steady winds.
There will be sticky humidity and no chance of precipitation.
Overall, poor visibility is likely.
Note: air quality will be poor.

The weather on June 28, 2028 will be mostly cloudy.
In the morning, it will be tropical storm, and the temperature is expected to reach 16°.

In the afternoon, it will be hail, and the temperature is expected to reach -23°.
At night, it will be sun breaks after rain, and the temperature is expected to reach 12°.
Expect high, fast clouds with calm winds.
There will be comfortable humidity and no chance of precipitation.
Overall, excellent visibility is likely.
Note: pressure will be rising.

The weather on April 23, 2027 will be clear skies.
In the morning, it will be heavy rain, and the temperature is expected to reach 9°.
In the afternoon, it will be sunny with passing showers, and the temperature is expected to reach -6°.
At night, it will be mist, and the temperature is expected to reach 5°.
Expect broken cloud bands with steady winds.
There will be dry air and a moderate chance of precipitation.
Overall, excellent visibility is likely.
Note: air quality will be fair.

The weather on February 12, 2025 will be mist.
In the morning, it will be blizzard, and the temperature is expected to reach 30°.
In the afternoon, it will be mostly cloudy, and the temperature is expected to reach -3°.
At night, it will be mostly cloudy, and the temperature is expected to reach -8°.
Expect a slate-gray ceiling with gusty winds.
There will be sticky humidity and a slight chance of precipitation.
Overall, excellent visibility is likely.
Note: pressure will be steady.

The weather on June 22, 2024 will be sleet.
In the morning, it will be tropical storm, and the temperature is expected to reach 2°.
In the afternoon, it will be mist, and the temperature is expected to reach 8°.
At night, it will be cold snap, and the temperature is expected to reach 8°.
Expect a slate-gray ceiling with a light breeze.
There will be comfortable humidity and a high chance of precipitation.
Overall, good visibility is likely.
Note: pressure will be steady.

The weather on February 7, 2026 will be tropical storm.
In the morning, it will be mist, and the temperature is expected to reach 40°.
In the afternoon, it will be mostly cloudy, and the temperature is expected to reach -12°.
At night, it will be blizzard, and the temperature is expected to reach -8°.
Expect a sharp, crisp horizon with a light breeze.
There will be comfortable humidity and no chance of precipitation.
Overall, good visibility is likely.
Note: pressure will be falling.

The weather on October 24, 2027 will be overcast.
In the morning, it will be partly cloudy, and the temperature is expected to reach 38°.
In the afternoon, it will be blizzard, and the temperature is expected to reach -23°.
At night, it will be sun breaks after rain, and the temperature is expected to reach 20°.
Expect a sharp, crisp horizon with steady winds.
There will be dry air and a high chance of precipitation.
Overall, reduced visibility is likely.
Note: pressure will be steady.

The weather on August 23, 2025 will be sunny.
In the morning, it will be dust storm, and the temperature is expected to reach -27°.
In the afternoon, it will be fog, and the temperature is expected to reach 23°.
At night, it will be sleet, and the temperature is expected to reach -11°.
Expect a soft golden dawn with variable winds.
There will be sticky humidity and a high chance of precipitation.
Overall, poor visibility is likely.
Note: pollen levels will be elevated.

Output_2

The weather on May 6, 2027 will be thunderstorms.
In the morning, it will be rain then clearing, and the temperature is expected to reach 10°.
In the afternoon, it will be sunny with passing showers, and the temperature is expected to reach -4°.
At night, it will be sleet, and the temperature is expected to reach -21°.

Expect broken cloud bands with gusty winds.
There will be dry air and a slight chance of precipitation.
Overall, poor visibility is likely.
Note: cloud cover will be dense.

The weather on November 10, 2028 will be showers.
In the morning, it will be sunny, and the temperature is expected to reach -20°.
In the afternoon, it will be clear skies, and the temperature is expected to reach 28°.
At night, it will be showers, and the temperature is expected to reach -13°.
Expect a slate-gray ceiling with a light breeze.
There will be sticky humidity and a slight chance of precipitation.
Overall, reduced visibility is likely.
Note: UV levels will be moderate.

The weather on July 29, 2025 will be heatwave.
In the morning, it will be mostly cloudy, and the temperature is expected to reach 1°.
In the afternoon, it will be sleet, and the temperature is expected to reach -11°.
At night, it will be snow, and the temperature is expected to reach -30°.
Expect a hazy glow with a light breeze.
There will be muggy air and a slight chance of precipitation.
Overall, poor visibility is likely.
Note: UV levels will be high.

The weather on August 10, 2028 will be heavy rain.
In the morning, it will be snow, and the temperature is expected to reach -14°.
In the afternoon, it will be windy, and the temperature is expected to reach 19°.
At night, it will be mostly cloudy, and the temperature is expected to reach -5°.
Expect a pale blue sky with gusty winds.
There will be comfortable humidity and a high chance of precipitation.
Overall, poor visibility is likely.
Note: air quality will be fair.

The weather on December 28, 2025 will be drizzle.
In the morning, it will be thunderstorms, and the temperature is expected to reach 11°.

In the afternoon, it will be mist, and the temperature is expected to reach 39°.
At night, it will be showers, and the temperature is expected to reach -23°.
Expect low, heavy clouds with variable winds.
There will be dry air and a moderate chance of precipitation.
Overall, reduced visibility is likely.
Note: pressure will be falling.

The weather on September 10, 2027 will be partly cloudy.
In the morning, it will be showers, and the temperature is expected to reach -7°.
In the afternoon, it will be partly cloudy, and the temperature is expected to reach -8°.
At night, it will be windy, and the temperature is expected to reach 25°.
Expect a pale blue sky with steady winds.
There will be muggy air and a high chance of precipitation.
Overall, excellent visibility is likely.
Note: pressure will be steady.

The weather on February 16, 2028 will be fog.
In the morning, it will be heatwave, and the temperature is expected to reach -17°.
In the afternoon, it will be fog, and the temperature is expected to reach 39°.
At night, it will be clear skies, and the temperature is expected to reach 34°.
Expect a soft golden dawn with strong crosswinds.
There will be muggy air and a slight chance of precipitation.
Overall, reduced visibility is likely.
Note: pollen levels will be elevated.

The weather on February 18, 2027 will be showers.
In the morning, it will be rain then clearing, and the temperature is expected to reach -9°.
In the afternoon, it will be fog, and the temperature is expected to reach 24°.
At night, it will be mostly cloudy, and the temperature is expected to reach 16°.
Expect a pale blue sky with strong crosswinds.
There will be dry air and a high chance of precipitation.
Overall, good visibility is likely.
Note: UV levels will be high.

The weather on October 12, 2026 will be sunny.
In the morning, it will be overcast, and the temperature is expected to reach 20°.
In the afternoon, it will be mostly cloudy, and the temperature is expected to reach 33°.
At night, it will be heatwave, and the temperature is expected to reach 6°.
Expect a pale blue sky with steady winds.
There will be sticky humidity and a moderate chance of precipitation.
Overall, poor visibility is likely.
Note: pressure will be falling.

The weather on October 28, 2025 will be thunderstorms.
In the morning, it will be sunny with passing showers, and the temperature is expected to reach -24°.
In the afternoon, it will be rain then clearing, and the temperature is expected to reach 11°.
At night, it will be fog, and the temperature is expected to reach -25°.
Expect a slate-gray ceiling with gusty winds.
There will be comfortable humidity and a slight chance of precipitation.
Overall, poor visibility is likely.
Note: cloud cover will be dense.

Output_3

The weather on March 14, 2028 will be partly cloudy.
In the morning, it will be cold snap, and the temperature is expected to reach -13°.
In the afternoon, it will be heatwave, and the temperature is expected to reach -16°.
At night, it will be mist, and the temperature is expected to reach 31°.
Expect broken cloud bands with a light breeze.
There will be comfortable humidity and a high chance of precipitation.
Overall, reduced visibility is likely.
Note: pollen levels will be elevated.

The weather on July 3, 2026 will be rain then clearing.
In the morning, it will be clear skies, and the temperature is expected to reach 22°.
In the afternoon, it will be overcast, and the temperature is expected to reach -8°.
At night, it will be light rain, and the temperature is expected to reach 21°.
Expect high, fast clouds with variable winds.

There will be sticky humidity and no chance of precipitation.

Overall, good visibility is likely.

Note: pressure will be rising.

The weather on May 6, 2024 will be clear skies.

In the morning, it will be mist, and the temperature is expected to reach 18°.

In the afternoon, it will be windy, and the temperature is expected to reach 7°.

At night, it will be sunny with passing showers, and the temperature is expected to reach 7°.

Expect a sharp, crisp horizon with calm winds.

There will be comfortable humidity and no chance of precipitation.

Overall, excellent visibility is likely.

Note: cloud cover will be patchy.

The weather on April 2, 2027 will be sun breaks after rain.

In the morning, it will be clear skies, and the temperature is expected to reach 2°.

In the afternoon, it will be snow, and the temperature is expected to reach 35°.

At night, it will be sun breaks after rain, and the temperature is expected to reach 1°.

Expect a soft golden dawn with calm winds.

There will be sticky humidity and a moderate chance of precipitation.

Overall, excellent visibility is likely.

Note: pollen levels will be elevated.

The weather on April 24, 2025 will be clear skies.

In the morning, it will be snow, and the temperature is expected to reach 22°.

In the afternoon, it will be mist, and the temperature is expected to reach 6°.

At night, it will be fog, and the temperature is expected to reach -20°.

Expect a sharp, crisp horizon with a light breeze.

There will be dry air and a moderate chance of precipitation.

Overall, poor visibility is likely.

Note: UV levels will be high.

The weather on September 27, 2027 will be sunny.

In the morning, it will be light rain, and the temperature is expected to reach 35°.

In the afternoon, it will be snow, and the temperature is expected to reach -12°.

At night, it will be windy, and the temperature is expected to reach -28°.
Expect low, heavy clouds with calm winds.
There will be comfortable humidity and a slight chance of precipitation.
Overall, excellent visibility is likely.
Note: pressure will be falling.

The weather on June 19, 2026 will be cold snap.
In the morning, it will be showers, and the temperature is expected to reach 12°.
In the afternoon, it will be mostly cloudy, and the temperature is expected to reach 39°.
At night, it will be clear skies, and the temperature is expected to reach 11°.
Expect a slate-gray ceiling with variable winds.
There will be dry air and a slight chance of precipitation.
Overall, excellent visibility is likely.
Note: pollen levels will be elevated.

The weather on August 6, 2025 will be sunny with passing showers.
In the morning, it will be overcast, and the temperature is expected to reach 32°.
In the afternoon, it will be windy, and the temperature is expected to reach 37°.
At night, it will be showers, and the temperature is expected to reach 2°.
Expect high, fast clouds with variable winds.
There will be comfortable humidity and a moderate chance of precipitation.
Overall, good visibility is likely.
Note: UV levels will be high.

The weather on July 19, 2026 will be overcast.
In the morning, it will be mist, and the temperature is expected to reach 33°.
In the afternoon, it will be tropical storm, and the temperature is expected to reach 5°.
At night, it will be light rain, and the temperature is expected to reach -9°.
Expect a hazy glow with strong crosswinds.
There will be dry air and no chance of precipitation.
Overall, poor visibility is likely.
Note: pressure will be falling.

The weather on May 21, 2025 will be sun breaks after rain.

In the morning, it will be thunderstorms, and the temperature is expected to reach -30°.
In the afternoon, it will be thunderstorms, and the temperature is expected to reach -22°.
At night, it will be fog, and the temperature is expected to reach 15°.
Expect a soft golden dawn with calm winds.
There will be sticky humidity and a moderate chance of precipitation.
Overall, reduced visibility is likely.
Note: air quality will be fair.

Output_4

The weather on May 5, 2026 will be snow.
In the morning, it will be fog, and the temperature is expected to reach -2°.
In the afternoon, it will be overcast, and the temperature is expected to reach 28°.
At night, it will be partly cloudy, and the temperature is expected to reach -5°.
Expect a hazy glow with strong crosswinds.
There will be comfortable humidity and a high chance of precipitation.
Overall, excellent visibility is likely.
Note: UV levels will be high.

The weather on December 28, 2024 will be heavy rain.
In the morning, it will be snow, and the temperature is expected to reach 11°.
In the afternoon, it will be mist, and the temperature is expected to reach -23°.
At night, it will be windy, and the temperature is expected to reach -19°.
Expect high, fast clouds with a light breeze.
There will be muggy air and a high chance of precipitation.
Overall, excellent visibility is likely.
Note: UV levels will be moderate.

The weather on July 26, 2025 will be fog.
In the morning, it will be sun breaks after rain, and the temperature is expected to reach 36°.
In the afternoon, it will be fog, and the temperature is expected to reach 10°.
At night, it will be light rain, and the temperature is expected to reach -21°.
Expect a hazy glow with gusty winds.
There will be dry air and a slight chance of precipitation.

Overall, reduced visibility is likely.

Note: pressure will be falling.

The weather on March 12, 2027 will be rain then clearing.

In the morning, it will be drizzle, and the temperature is expected to reach -16°.

In the afternoon, it will be heatwave, and the temperature is expected to reach -17°.

At night, it will be clear skies, and the temperature is expected to reach 23°.

Expect low, heavy clouds with calm winds.

There will be dry air and no chance of precipitation.

Overall, excellent visibility is likely.

Note: air quality will be fair.

The weather on August 4, 2028 will be fog.

In the morning, it will be blizzard, and the temperature is expected to reach 8°.

In the afternoon, it will be cold snap, and the temperature is expected to reach 26°.

At night, it will be showers, and the temperature is expected to reach -12°.

Expect a slate-gray ceiling with gusty winds.

There will be comfortable humidity and a high chance of precipitation.

Overall, excellent visibility is likely.

Note: air quality will be poor.

The weather on March 10, 2027 will be rain then clearing.

In the morning, it will be sunny, and the temperature is expected to reach 20°.

In the afternoon, it will be overcast, and the temperature is expected to reach 31°.

At night, it will be clear skies, and the temperature is expected to reach -11°.

Expect a soft golden dawn with calm winds.

There will be dry air and a high chance of precipitation.

Overall, reduced visibility is likely.

Note: cloud cover will be patchy.

The weather on January 14, 2028 will be blizzard.

In the morning, it will be sleet, and the temperature is expected to reach 37°.

In the afternoon, it will be sleet, and the temperature is expected to reach -11°.
